50/10 Ton Double Girder Overhead Crane

50/10 Ton Crane is a type of crane where a horizontal member, supporting a movable hoist, is fixed to the end of a fixed spider frame. The hoist is movable over the member and is used to lift and support the load. The lazy frame is fixed at an angle of 45° to the horizontal beam with wheels for movement on smooth floors. The load is supported by a four-wheeled arch, which can pivot on a central axis. The crane can be operated by either manual or automated means.

60/10 Ton Crab

60/10 Ton Crab is a type of crane where a horizontal member, supporting a movable hoist, is fixed to the end of a fixed spider frame. The hoist is movable over the member and is used to lift and support the load. The lazy frame is fixed at an angle of 45° to the horizontal beam with wheels for movement on smooth floors. The load is supported by a four-wheeled arch, which can pivot on a central axis. The crane can be operated by either manual or automated means.

30/10 Ton Double Girder EOT Crane

30/10 Ton Double Girder EOT Crane is a type of crane where a horizontal member, supporting a movable hoist, is fixed to the end of a fixed spider frame. The hoist is movable over the member and is used to lift and support the load. The lazy frame is fixed at an angle of 45° to the horizontal beam with wheels for movement on smooth floors. The load is supported by a four-wheeled arch, which can pivot on a central axis. The crane can be operated by either manual or automated means.
